

FRESHWATER FISHERIES IN NH - PRESENCE BY TOWN

Data Availability:

 State complete

Data Layer: FRESHWATER FISHERIES IN NH -
PRESENCE BY TOWN

Primary Layer Name: FISH_PBNH
Layer Content: Presence of freshwater fisheries by town
Data Structure: VECTOR
Layer Type: POINT

Source: NH FISH AND GAME DEPARTMENT
Source Scale: N/A
Source Media: DIGITAL

Automated By: NH FISH AND GAME DEPARTMENT
Coordinate Reference: NH State Plane Feet
Horizontal Datum: 1983
Tile: STATE

Status: COMPLETE
Last Revision: March, 2009
Available From: Complex Systems Research Center, UNH

GENERAL DESCRIPTION

This data layer reports, by town, the presence of general freshwater fisheries for 48 species.

These data consist of sampling conducted by the NH Fish and Game Department, NH Department of Environmental Services Biomonitoring Program, and US Forest Service and is current through the 2008 field season. Because of gear selectivity and a variety of sampling objectives, these data should be used primarily to express species presence and not necessarily species absence.
