

DIGITAL FLOOD INSURANCE RATE MAPS (DFIRMs)

Data Availability:

 County complete

Data Layer: DIGITAL FLOOD INSURANCE RATE MAPS (DFIRMs)

Primary Layer Name: FLOODxx,
where xx = county FIPS code

Layer Content: FLOODPLAINS & ASSOCIATED DATA

Data Structure: VECTOR

Layer Type: Geodatabase (polygon, line, point)

Source: FEMA

Source Scale: VARIES

Source Media: PAPER

Automated By: CSRC, UNH

Coordinate Reference: NH State Plane Feet

Horizontal Datum: 1983

Tile: COUNTY

Status: IN PROGRESS

Last Revision: March, 2013

Available From: Complex Systems Research Center, UNH

GENERAL DESCRIPTION

The Digital Flood Insurance Rate Map (DFIRM) Database depicts flood risk information and supporting data used to develop the risk data. The primary risk classifications used are the 1-percent-annual-chance flood event, the 0.2-percent-annual-chance flood event, and areas of minimal flood risk. The DFIRM Database is derived from Flood Insurance Studies (FISs), previously published Flood Insurance Rate Maps (FIRMs), flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available. The FISs and FIRMs are published by the Federal Emergency Management Agency (FEMA). The specifications for the horizontal control of DFIRM data files are consistent with those required for mapping at a scale of 1:12,000.
