Horizontal Datum: 1983  
Tile: STATE

Status: COMPLETE  
Last Revision: October, 2009  
Available From: Complex Systems Research Center, UNH

## GENERAL DESCRIPTION

The Places of Worship dataset is composed of any type of building or portion of a building that is used, constructed, designed, or adapted to be used as a place for religious and spiritual activities. These facilities include, but are not limited to, the following types: chapels, churches, mosques, shrines, synagogues, and temples.

The license free Large Protestant Churches, Mosques, Jewish Synagogues, and Roman Catholic Churches in Large Cities datasets were merged together to create the initial data for the Places of Worship dataset. Additional entities have been added from TGS research.

This dataset contains Buddhist, Christian, Hindu, Islamic, Judaic, and Sikh places of worship. Unitarian places of worship have been included when a congregation from one of these religions meets at a church owned by a Unitarian congregation. Some Protestant denominations are not currently represented in this dataset.
